

## Kerry Park Masterplan

The Kerry Park Masterplan is a fully remodeled and improved park that would be monumental for the park system and residents of International Falls. Kerry park is the center of the city which makes it the best location for a brand new park. The masterplan focuses on three main issues: connectivity/ safety, an updated hockey arena/ community center, and new amenities introduced to the city of International Falls as well as updating and improving the ones that are already there.

The new layout of the road and parking lot pushes the traffic flow around the outside perimeter of the recreational areas of the park. Once in the park, one does not have to ever cross traffic in order to get from one amenity to the other creating a safe and relaxing environment.

The hockey stadium structurally is in need of repair. Due to the costs of the repair and demands the city needs for its residents, a proposed addition is being added to the North. The new 49,000SF facility will add community space, a large commercial kitchen, daycare, basketball courts, concessions, Zamboni storage, and a running track above and around the basketball courts. The existing hockey rink would remain in the same location while everything else would be built around it.

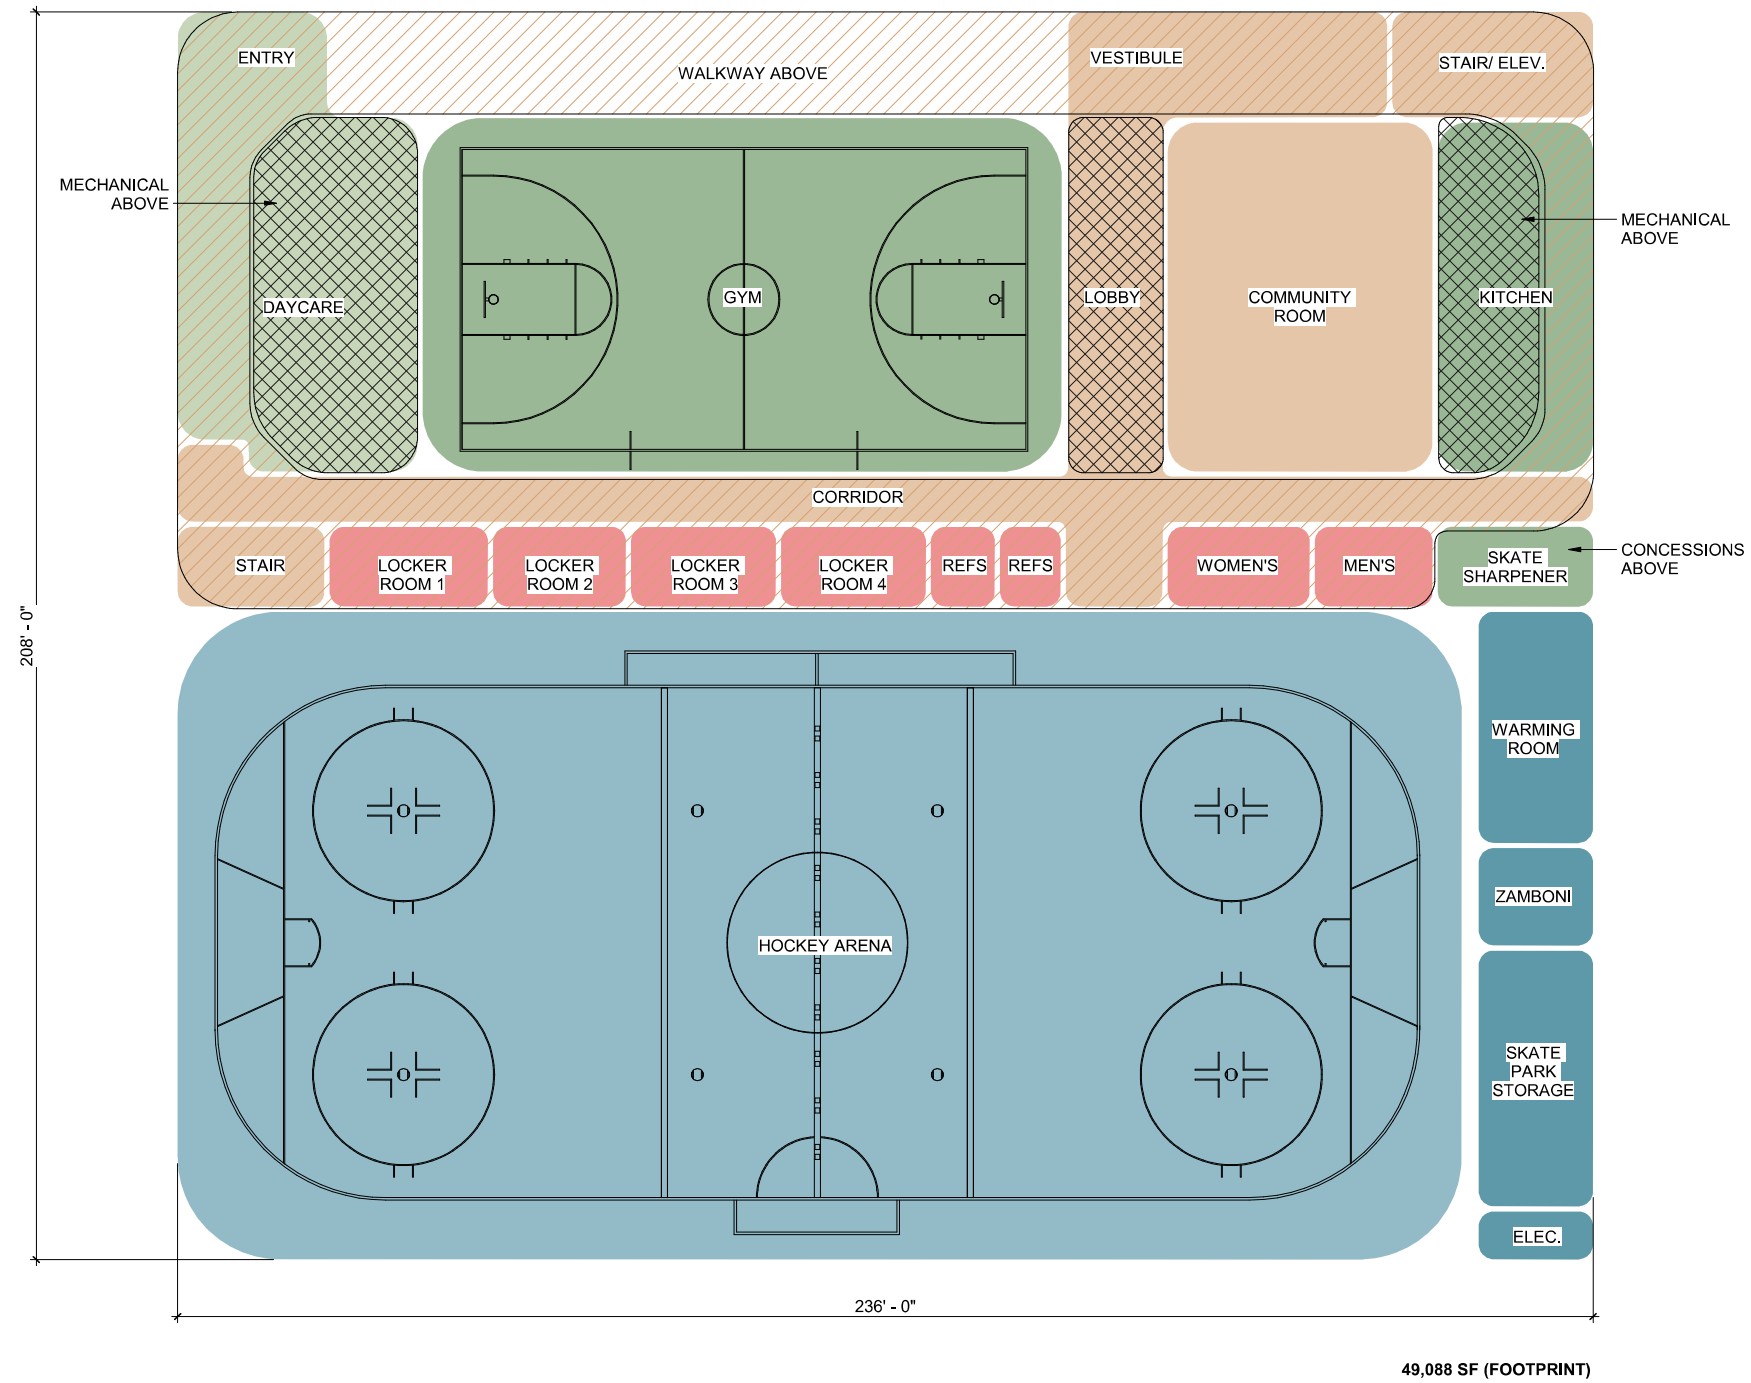

After a full comprehensive masterplan study of the International Falls park system, we were able to determine the amenities Kerry Park needs. It was also easy to determine what could be removed in order to make room for more amenities the city of International Falls is missing. A few of the focal points are the ~33' sledding hill, splash park, rotated softball field, dog park, and ice skating trail. These amenities are ones most people will typically travel to, and with Kerry Park being so centrally located creates a great opportunity for all of the residents of International Falls to enjoy.
